## Lattice Multiplication with Decimals

## Step-by-Step

### 3.42 <br> * <br> 6.9

Ok! I know how to do Lattice, but I don't remember how to multiply with decimals!!!

### 3.42 * 6.9

Make a grid the exact size of your problem. A 2 digit number times a 3 digit number gets a $2 \times 3$ grid. Draw a diagonal line in each box.

### 3.42 * 6.9

Place the decimal point above/beside the line in the grid.

### 3.42 * 6.9

Multiply 6 * 2 and place the answer in the grid where the lines meet.

### 3.42 * 6.9

Multiply 4 * 6 and place the answer in the grid where the lines meet.

### 3.42 * 6.9

Multiply 3 * 6 and place the answer in the grid where the lines meet. Use a zero as a place holder.

### 3.42 * 6.9

Multiply 2 * 9 and place the answer in the grid where the lines meet.

### 3.42 * 6.9

Multiply 4 * 9 and place the answer in the grid where the lines meet.

### 3.42 * 6.9

Multiply 3 * 9 and place the answer in the grid where the lines meet.

### 3.42 * 6.9

Now add the diagonals and place the answer below the grid. Be sure to carry to the next diagonal if you have a 2 digit answer.

### 3.42 * 6.9

Now add the diagonals and place the answer below the grid. Be sure to carry to the next diagonal if you have a 2 digit answer.

### 3.42 * 6.9

Now add the diagonals and place the answer below the grid. Be sure to carry to the next diagonal if you have a 2 digit answer.

### 3.42 * 6.9

Now add the diagonals and place the answer below the grid. Be sure to carry to the next diagonal if you have a 2 digit answer.

### 3.42 * 6.9

Now add the diagonals and place the answer below the grid. Be sure to carry to the next diagonal if you have a 2 digit answer.

### 3.42 * 6.9

Now you need to place the decimal. Follow the lines until they meet.

### 3.42 * 6.9

Now drop on the diagonal to place the decimal.

### 3.42 * 6.9

Your answer is $23.598!!$
